Decals

Mark out floor areas with monochromatic decals

Use the decals to mark out areas available for stacking products and to separate off parts of a floor for different activities. The decals are also useful for marking out the opening radii of doors and installations that need to be kept free of obstructions. The arrow is used to mark the direction of flow and the footstep is used for pedestrian gangways.

Combine the various colours, e.g. yellow for areas available for use and red for areas where storage/parking is not permitted.

Stock item

Selection from our **FM** range

Our **FM** range is available in various colours

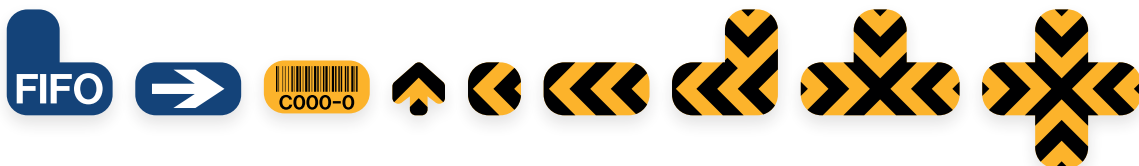

Printed

Create unique decals with the print and colour of your choice

Use the printed decals just like the monochromatic ones. Black-and-yellow decals indicate the need for heightened awareness and act as a warning. Our range contains a number of sizes and shapes, but because they are made to order, special formats are possible. You choose the colour and information to be printed, e.g. "storage area" (with or without barcode, check digit or arrow), "picking order" etc.

Item produced to order

Selection from our **FMP** range

Roll

Continuous monochromatic lines and warning lines

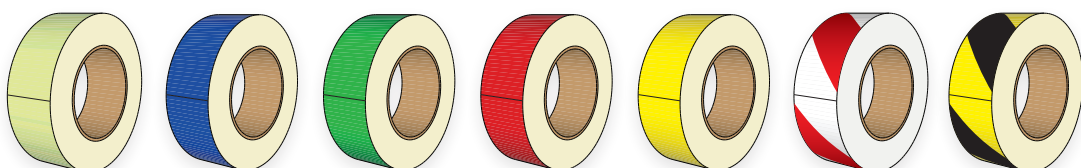

Continuous lines are used to enforce strict subdivision of areas. Examples are where strict separation of truck and pedestrian traffic is needed, where machines must be given a certain safe perimeter or where there must be no cross-interference of activities.

Use the continuous lines just like the decals. Black-and-yellow lines indicate the need for heightened awareness and act as a warning.

Continuous lines on a roll are also available in a photoluminescent version for use where evacuation routes need to be clearly indicated in the event of a power outage.

Safety

Markings for mandatory signs, warnings, prohibitions, emergencies, fire and danger

Clear safety markings in the workplace will prevent injuries and accidents and therefore require great care in their planning and execution. Over recent years, there has been a significant increase in the number of symbols, including the issue of a new ISO standard. The symbols displayed on our website are available in stock for immediate delivery, but if you cannot find what you are looking for please contact us – we have more, but not all of them are displayed on the website.

For more symbols, see our brochure **Safety signs** or our website

Placement

Visualise where things belong

One reason for keeping a place neat and tidy is that everything has its place. Our placement decals contain a three-dimensional illustration together with a descriptive text of the item – hard to misunderstand! An unexpected aspect of starting to mark out where things are to be kept when not in use is that the number of resources can be reduced, time spent looking for them is minimised and the operation is made more efficient.

Our range contains many commonly used symbols, and the number is increasing all the time.

Recycling

For a sustainable future

Separating different types of waste benefits both the company and the environment. If you mark out the locations with the right recycling decal, it will be easy to do it correctly right from the start, thus avoiding time-consuming resorting.

Selection from our **PDF** range

Typical applications are storage tents with asphalt surfaces and premises where the floor has no surface finish or is unheated.

FMA is made from a soft vinyl that moulds itself against an uneven surface. The adhesive is strong and viscous, with the special characteristic that it melts into the asphalt, thereby ensuring good adhesion.

- The label is laminated to protect against wear
- All our floor markings are available in an FMA version
- Easy to fit.

Information holders

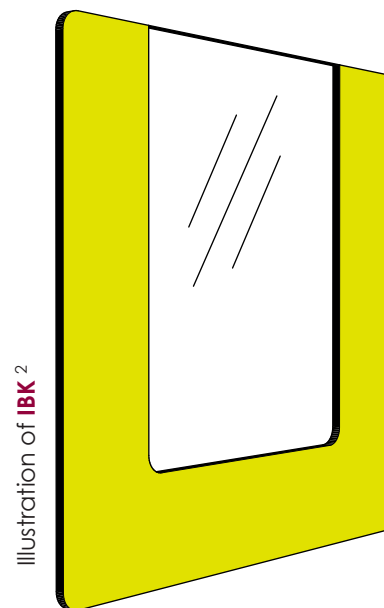

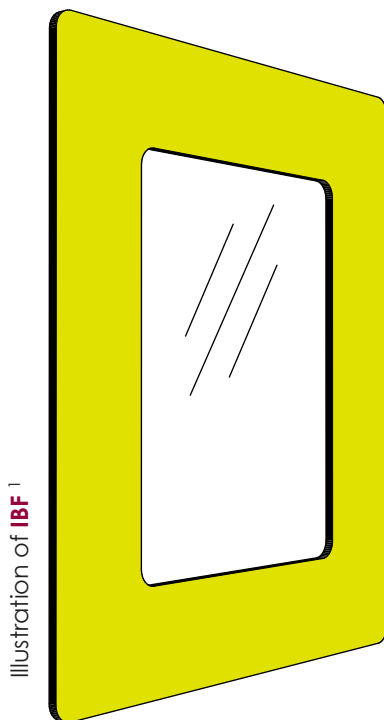

Label holders for floor surfaces

With your own printed materials and IBF and IBK information holders, you can attach information to a floor and change it as and when needed.

- IBF is enclosed on four sides and is used where the information is permanent.¹
- IBK is enclosed on three sides and allows information to be changed.²

Available in two sizes to match A5 and A4 paper formats.
The products have a yellow frame of 40 mm – easy to fit.

The future?

Products that are not yet available!

What products are available and what new ones are needed? Our range of products for floor marking and labelling systems is constantly increasing. Requirements in terms of functionality and placement demand new solutions. The work these involve requires dialogue with customers and suppliers.

Examples of new items are our FMA and IBF & IBK products, and the new symbols we are creating for safety and placement.

Contact us for more information.

Material

Laminated self-adhesive floor markings

The products are made of vinyl with a self-adhesive rear that is covered in a strong protective laminate. They come supplied with paper on the rear, by the sheet, singly or on a roll.

IBF & IBK consist of a PVC panel with a non-reflective matt finish – the rear is provided with 38 mm wide double-sided adhesive tape with good adhesive properties.

Clean the floor surface when fitting.
When fitting a roll, plan the process carefully.

Sizes & Colours

Various formats and all primary colours

Decal, Printed, Roll and FMA

Available in two sizes: FM 60 and FM 90. FM 60 is based on a 60 mm round shape and FM 90 on a 90 mm round shape. The two sizes are available in the following shapes: round, oval, corner, T-shaped, cross, arrow and footstep.

The rolls are either 60 or 90 mm wide. Monochromatic rolls come in 25 metre lengths and, printed ones in 24 metre lengths. The photoluminescent roll is available in a width of 88 mm and a length of 10 metres.

Colours: yellow, green, red, blue and white, plus yellow/black and red/white for rolls. FMA is available in white and printed with the colour of your choice (applies to non-photoluminescent rolls).

Safety, Placement, Recycling, IBF & IBK

Portrait A4 and A5. IBF & IBK have a 40 mm frame around the format in question and may be used with portrait or landscape orientation.

Colours: the colour of the safety markings follows the ISO and AFS standard, the placement decals are blue with white symbols, and recycling is green with a white symbol. IBF & IBK have a yellow frame.
